

Technical Bulletin

No. EAL001AU
Release Date: 01/2007

Subject: Use of Personal Energy Absorbers

Capital Safety supplies single personal shock absorbing packs under the DBI-SALA & PROTECTA brands. The units are manufactured with attachment hardware for direct connection between vertical rope climbing systems, horizontal systems and other select applications where free fall distances must be limited.

Part No. Z4

Part No. Z8

Part No. AE521AU

In this configuration, a personal shock absorber supplied without lanyard tails **SHALL NOT** be retro-fitted with wire, rope or webbing tails. The shock absorber is supplied with a mark of approval having been tested to confirm that it conforms to the requirements of AS/NZS1891.1 as a stand alone unit. The addition of non-approved extensions to this product will void all product warranty, as the product performance may be compromised without testing.

If a shock absorber is required with lanyard tails, a complete unit **MUST** be supplied by Capital Safety to certify product performance
